

Amendments to the Specification:

Please replace the paragraph beginning on page 15, line 25, with the following rewritten paragraph:

As described above, the white-light reconstruction holographic recording region is formed to be 2 μm to 80 μm thick, and the Fourier holographic recording region in which data are ~~re-coded~~ recoded-recording is formed to be greater than or equal to 100 μm thick, thereby obtaining a holographic recording medium that is abundantly decorative and capable of storing a larger amount of data.
